### BACKGROUND:

The City of Hallandale Beach shares the same water resource challenges as many other cities in South Florida. With a population that is rising, coupled with the limitations of the Biscayne Aquifer, the City must plan carefully to meet the water supply needs of the future.

One way to reduce the City's dependence on the Aquifer is through utilizing reuse or reclaimed water. Reuse water is essentially water recycling, thus water conservation, due to the fact that wastewater is being treated and reused for a beneficial purpose, such as irrigation. Reuse water is also sustainable and cost effective water supply.

In order to meet the City's Sustainability Action Plan goal to reduce its portable water consumption, the City has already executed phase I of water re-use. Phase II would expand the already effective water re-use program.

### SCOPE OF WORK:

The scope of work for this project includes, but is not limited to the installation of approximately 4,500 linear feet of new 8 inch reuse irrigation water pipeline from the existing phase I pump station to the proposed medians within the Three Islands Boulevard neighborhood. Reuse water pipeline construction limits include a portion of Three Islands Boulevard (median just south of Atlantic Shores Boulevard to median just south of Parkview Drive intersection), and the entire lengths of Parkview Drive and Leslie Drive roadways. The scope of work also includes upgrades to the existing mechanical and electrical equipment.

### PROJECT STATUS UPDATE:

The construction phase of the project is scheduled to commence on September 18, 2023 and completed by March 16, 2024. Construction hours will be Monday through Friday, 8:00 AM to 5:00 PM.

### PROJECT LOCATION / LIMITS:
